

Chuang Hsiang Technology Co., Ltd.

Elastomer light guides, daytime running lights, LED side-mirror covers

Chuang Hsiang Technology Co. is an ISO 9001-certified firm that is dedicated to the design, development, and production of high-end LED side-mirror covers and daytime running lights with stylish, state-of-the-art designs. All of the company's products carry E-mark, ECWE, EEC, SAE, and CCC approval.

Chuang Hsiang is the first company in Taiwan to develop LED mirror covers that can serve as direct replacements for the original covers. Its innovative covers include LED signal lights and even foot lamps that illuminate the ground when the car door is opened.

New functions and attractive styling make up only part of the appeal of the company's products. General Manager Jeff Lin says that his mission is to supply only high-quality top-notch products to suppliers around the world; his catalog is filled with more than 130 models of mirror covers, most of which have been developed to provide an optimum match for specific car models.

The firm used its accumulated expertise in LED automotive applications to diversify into LED edge-lighting strips (elastomer light guides, or light bars) that conserve energy and enhance styling.

These internationally patented products are made of three layers of different materials and work on the principle of the optical-fiber light guide. They can be used in a wide range of consumer and industrial applications such as automobile and motor cycle lamps, safety helmets, warning lights, and position lights. Each strip needs only a few LEDs to emit a bright and highly balanced light in a variety of color choices.
