

She Hui

Machinery Co., Ltd.

Air Classify Pulverizer, Pulsaire Collector, Rotary Valve, Mixer, Blender, Dryer, Air Conveying Device

Ever since it was established in 1982, She Hui Machinery Co., Ltd. has worked constantly on the development and production of Air Classify Pulverizer, Pulsaire Collector, Mixer, Blender, Dryer, and high-pressure Air Conveying Device, among other items. All of its machines are marketed under its own brand.

The company's more than 30 years of experience and seasoned knowledge are evident in its ACP Pulverizer, which can pulverize and separate a wide range of materials evenly and efficiently. With an interior temperature that remains stable, this machine, which won TUV certification in 2011, is ideal for processing such materials as coating resin and food.

An improved separation function gives ACP Pulverizer a narrow distribution range that provides better consistency of shape in each of the grains it produces. Users can easily control the size of pulverized particles by adjusting the wind volume rotation speed of the separator. Safety is enhanced by an interlocking system that automatically prevents operators from turning the machine on when the pulverization room cover is open, and locks the room cover when the machine is in operation. Easily removable separator and grinding disk structures make the machine simple to clean and maintain, and fit it especially for operations that entail a frequent change of raw materials to be pulverized.

Another of She Hui's top products is the Cone Screw Mixer, which mixes materials quickly and evenly while consuming less power than competing models. It requires only 30KW+1.5KW of power to mix 25,000 liters of materials, for example—just 20%-30% of the power needed by other models. Moreover, this machine is easy to clean with water only, and occupies a small space to install.

She Hui Machinery Co., Ltd.
