

# Uni-Protech Industrial Co., Ltd.

## Fasteners, stamped and CNC-machined hardware

Established in 1992, Uni-Protech Industrial Co. is an ISO 9001:2008-certified supplier of fasteners and hardware with a workforce consisting of experienced personnel having been engaged in manufacturing metallic parts for over 20 years.

Starting out as a 6-person business, Uni-Protech built up solid business relationships with buyers at home and abroad. To better serve its overseas customers, the company set up a branch in Newcastle, Australia in 2003 and another in China's Suzhou, under the name of "Uni-Protech Suzhou Fastener," in 2010.

The company makes mostly fasteners and hardware for automotive, industrial, electronic, construction, and sports equipment applications, including car and truck wheel nuts, mining construction parts, lawnmower engine parts, clips, and prevailing-torque locknuts, as well as stamped and CNC-machined parts for other uses.

In-house, the firm's ISO/IEC 17025:2005-certified laboratory and seasoned R&D team enable Uni-Protech to fill custom orders quickly and provide customers with quality-guaranteed products plus reliable service packages.

Partnership relations with over 100 manufacturers in Taiwan, China, and South Korea make up one of the reasons why Uni-Protech can offer more competitive prices than its competitors. Sound packaging and warehousing policies help to add extra value to its products.
