

Pinnacle Machine Tool Co., Ltd.

5-axis machining centers

The 1976-founded Pinnacle Machine Tool Co., Ltd. excels in 5-axis, double-column, vertical and horizontal type machining centers, not to mention a wide range of computerized numerical control (CNC) lathes and milling machines.

Besides meeting customer demand with complete product lines of outstanding quality, the company has an R&D team staffed with engineers whose machine tool industry experiences exceed 10 years. Using advanced tools including CAD/CAM/CAE computer programs and Finite Element Analysis, they come up with well constructed machines boasting excellent rigidity and reliability.

Pinnacle consistently stays well informed about current market and technology trends, the major reason behind the company's steady product improvement, which is achieved by solid partnerships with its dealers worldwide.

Customer-service engineers at the company receive training periodically to stay knowledgeable about current technologies and skills, as well as assembly details of the company's machines so they can consult and help customers to achieve optimal mechanical operation.

Pinnacle builds reliable products by placing importance on quality control and scientific management. All parts used in the company's machines are examined to meet stringent standards with advance instruments throughout the production.

The maker is also known for sales and customer-service divisions that provide efficient service such as offering technical solutions before and after sales.
