

Evergreen Spraying Technology Inc.

Spray guns, spray equipment, and related accessories

Evergreen Spraying Technology Inc. has been specializing in high-end spray guns and spraying equipment and accessories, mainly for professionals, for more than 30 years.

Drawing on its seasoned knowledge of designing and manufacturing, the company constantly develops and improves spray guns for agricultural, gardening and planting, and environmental cleaning purposes, setting itself apart from price-slashing suppliers of DIY models by targeting professional users. As a result of extensive research into material prosperities, the company's spray guns are made mostly of metal alloys and have improved structural design to provide light weight, easy nozzle interchangeability, and attractive looks.

For instance, the company's stainless steel spray guns have a patented structural design that allows users to change three different nozzles and easily adjust spraying pressure up to 800psi for enhanced utility, and offer a wide range of value-added finishing options for customers to choose from.

Evergreen boasts an integrated production capability that enables it to handle the whole development and production process from design and prototyping to manufacturing and packaging. An in-house QC (quality control) lab assures top quality. These facilities help to make sure that the company's spray guns are manufactured with a consistent quality comparable with that of Japan-made models.

The company's product line covers a variety of spray guns, fog sprayers, nozzles, agricultural machines, and related parts and accessories such as hoses, hose reels, universal joints, and valves. The products are exported to the U.S., Europe, the Middle East, and Asia, some under Evergreen's own "EST" brand. Evergreen provides custom manufacturing services as well as OEM (original equipment manufacturing) and ODM (original design manufacturing).
