

Benign Enterprise Co., Ltd.

Lathes, milling machines, band saws, grinders, and drill presses

Founded in 1976, Benign Enterprise Co., Ltd. is a machine-tool supplier that ships globally lathes, milling machines, drill presses, grinders and band saws.

The company will unveil several smart machines this year at the Taipei International Machine Tool Show 2013 (TIMTOS 2013), to be staged March 5-10, including a vertical turning and milling machine, an internal grinder and lathe, a core-drill press and an engraving and milling machine.

The vertical turning and milling machine is a vertical lathe with a patented spindle, which allows the machine to double as a machining center to make production efficiently. The internal grinder and lathe is a CNC double-spindle grinding machine with turning as second function.

The core-drill press is a tool with big-diameter hollow cutter, which extracts a core as a byproduct of drilling, with the hollow diameter as wide as 150mm to enable the drilled core for other uses.

The company's engraving and milling machine is developed for school shop courses with its MACH3 software, as well as being less expensive, easy and safe to operate. Accompanying this machine is the company's offer of a complete training program, including learning C and M software, CAD-CAM and live demonstrations.

The company's advantages include full inspection of every machine before delivery as well as combined shipment in one container whenever feasible to minimize customers' cost.
