

Chin Lih Hsing

Precision Enterprise Co., Ltd.

Brass inserts, fasteners for plastic molds, clinch parts,
CNC parts, auto parts

Since its inception in 1988, Chin Lih Hsing Precision Enterprise Co., Ltd. CLH has been dedicated to making precision metal parts and threaded inserts for a variety of applications, including automotives, computer connectors and components, and handset components.

Chin Lih Hsing's lineup is centered on fastener elements for thermo-set, thermoplastic, SMC (sheet-molded composites), GRP (glass reinforced plastic) and structural foam materials, as well as press-in inserts, screw-in inserts, and studs that undergo pre-heating or ultrasonic welding, all of which are available in diameter sizes of below 40mm, and globally sought-after for high quality.

The manufacturer's global competitiveness is derived mostly from a number of advanced production facilities employed in its factory, including 200 sets of NC (numerically controlled) machines and 30 sets of CNC (computer numerically controlled) machines, coupled with extensive know-how of metallurgy, such as brass, copper, iron, stainless steel and aluminum.

World-caliber quality control is also CLH's advantage, as the maker installs a full line of inspection instrument in-house, including 6 optical sorting machines and several profile projectors and micrometers. The company is also consistently carrying out by-the-book quality measurements, backed by ISO 9001 and TS16949 certifications.

With daily output of 3.0 million units of different inserts and fastener elements, this Taiwanese manufacturer can handle OEM (original equipment manufacturing) and ODM (original design manufacturing) orders as well, and welcomes partners from various sectors, especially auto parts in recent years.
