

# Motory Mate Technology Co., Ltd.

## Electric scooter

With a concern for humanity and the environment, Motory Mate Technology Co., Ltd. entered the field of electric scooter in 2011.

The company launched its Ecodas family of homegrown electric scooter in 2012. These vehicles have been certificated by Taiwan's Ministry of Transportation and Communications after passing safety tests for light-duty two-wheeled motor vehicles, and they are already patented in both Taiwan and China.

The first three letters of the Ecodas brand name, "eco," stand for both "ecology" and "economy." This factor appeals to the concepts of ecological protection, energy efficiency, carbon emissions reduction and economical savings.

The last two letters of Ecodas, "das," stand for "direction" and "arrival," which mean to pursue a successful goal in a positive direction.

Ecodas, therefore, is a brand of electric scooters that are dedicated to environmental protection, energy efficiency, and carbon reduction. It offers users a new lifestyle and lets people realize a harmonious coexistence between humans and the environment.

The design of the Ecodas logo combines its name and the product it supplies--a simple, attractive image of an electric scooter with sleek lines, which can easily help consumers build perceptual links to the brand.
