

Tai Tsuang Oil Seal Industry Co., Ltd.

Oil seals and related products for automobiles, motorcycles, machines, fitness equipment, etc.

Founded in 1961, Tai Tsuang Oil Seal Industry Co., Ltd. is a veteran ISO 9001-certified specialist in developing and manufacturing high-quality oil seals for a wide range of applications including automobiles, motorcycles, marine vessels, industrial machines, agricultural machines, fitness equipment, and many others. The main materials the company uses for making its quality products include NBR, polyacrylic, silicone, viton, and HNBR.

Tai Tsuang markets its own "TTO" brand oil seals globally, many to international tier-1 and -2 auto-parts suppliers.

The company set up a new factory in Taiwan in 1984 and began marketing under the "TTO" brand. Expansion continued in 1997 with the installation of more automatic manufacturing equipment and adoption of more stringent quality-control procedures to meet customers' needs. In 2007 the company built a high-efficiency automated warehouse logistics system with 100,000 storage points.

Through its global distribution channels, Tai Tsuang claims, it is always able to provide real-time services to customers worldwide. At the same time, its strong in-house R&D team strives constantly to develop high-grade products with a high technical threshold that meet customers' varying requirements for applications under demanding environments. The firm stresses that it has developed more than 30,000 kinds of oil seal and related products in different sizes and materials, and that it keeps enough inventory on hand to take rush or small-volume orders.

While maintaining steady growth, the manufacturer spares no effort to develop low-pollution materials, showing its determination to be a responsible protector of the environment.
