

Epoch Energy Technology Corporation

Oxy-hydrogen generators, engine carbon cleaning systems, hybrid fuel systems (for cars, trucks and buses), solar water heaters, solar technology products etc.

Founded in 2001, Epoch Energy Technology Corporation is dedicated to designing, developing and manufacturing alternative energy solutions that protect the environment, also globally marketing its advanced products under its own "EPOCH" brand.

The company's main product line, EPOCH Oxy-Hydrogen Generators, is enjoying rapid growth in the industrial sector for steel-cutting, welding and brazing, boiler and burner applications as an alternative for traditional acetylene, propane, LPG and other fuels.

Its Carbon Cleaning Systems are seeing unprecedented interest from around the world as the most affordable and environment friendly method to restore engine performance while lowering emissions. In addition, EPOCH carries an extensive line of solar energy products, including lighting, chargers, energy packs, PV Cells; and extremely efficient vacuum-tube solar water heaters.

The key advantage of the EPOCH Oxy-Hydrogen Generators is that pure water is the source for making the fuel--non-toxic and pollution-free oxy-hydrogen mixed gas. Since this fuel is created on demand, there are no risks associated with transporting or storing of high-pressure, explosive fuel tanks. Moreover, only 1cc of water can produce 1,700cc of mixed oxygen-hydrogen gas, burning of which releases only water vapor to make it the perfect renewable energy.

Thanks to his outstanding achievement in Oxy-Hydrogen fuel, Epoch's president Jack Lin is a frequent winner of many awards. In addition to prestigious awards all over the world, he is the winner of the globally reputable "Energy Globe World Award" for the Category "AIR" in 2010, receiving the highest honor from the European Union.

EPOCH-branded products have won certifications in dozens of nations as well as over 200 patents worldwide, and are exported to many regions and nations including Europe, the U.S., Mexico, Australia, Japan, South Korea, Malaysia, Thailand, Singapore and China. The company's Chinese subsidiary Epoch Dongguan was set up in 2008.
