

DIA-COMPE TAIWAN CO., LTD.

Aluminum bicycle parts and accessories, cold-forged bicycle parts

Dia-Compe Taiwan Co., Ltd. was founded in 1987 by Dia-Compe Group of Japan, a major supplier of high-quality, high-precision bicycle parts for customers all over the world, to serve as the parent company's main overseas manufacturing base.

The Taiwan company is located in the Taichung Industrial Park, which is also home to numerous other internationally leading developers and manufacturers of high-end bike-parts. The park is surrounded by integrated supply chains serving international customers.

The founder of Dia-Compe began making bicycle brake parts in Japan in 1930 and set up Yoshigai Machine & Metal Works Co., Dia-Compe's flagship firm, in 1949.

Dia-Compe Japan and its Taiwan subsidiary manufacture quality bicycle brake parts and components, as well as bicycle accessories, using self-developed advanced aluminum cold-forging techniques.

To meet strong global demand, the Dia-Compe Group set up its second overseas subsidiary, Kunsahn Dia-Compe, in China's Jiangsu Province 2001.

Dia-Compe notes that its fundamental theory for product development is "thinking safety and comfort in bicycling life." And, company officials stress, "We, as bicyclists, must provide a better environment and future for our children so that they will be able to keep riding bicycles forever!"

Dia-Compe Taiwan supplies a very wide range of products, including bicycle frames, fenders, gear shifters and levers, brake systems and parts, and other parts and accessories for the international market.
