

Josn Electronic Co., Ltd.

Wireless TPMS for passenger cars, trucks, buses, motorcycle, trike, quad aircraft etc.

Josn Electronic Co., Ltd. is an ISO/TS 16949- and ISO 14001-approved factory specializing in designing, developing and manufacturing state-of-the-art wireless tire pressure monitoring systems (TPMS) for the global market.

JOSN, founded in 1997, has grown remarkably over the years and has now become one of the leading Wireless TPMS experts in the world. In addition, JOSN is cooperating with Taipei Metro System (MRT) to produce and offer only the highest quality wireless data recorder in Taiwan. Besides quality and advanced products, the firm claims to be recognized among global customers for high-efficiency and professional services.

Josn points out that the TPMS is an efficient and effective solution to many of the current automotive safety problems. TPMS helps prevent driver from driving on deflated tires and reduce vehicle fuel consumption (by telling driver to inflate tires). Josn's own TYREDOG brand wireless TPMS, the company claims, is a relatively-new technology which has captured industry attention for its unique valve-stem cap external sensor design, which is extremely lightweight, compact specifically designed to simplify and reduce installation time. Through wireless technology, tire pressure and temperature information is displayed on the user-friendly graphic interface (LCD & TFT display).

Strong R&D capability has enabled Josn to utilize its core technology to develop the TD1000A series wireless TPMS for four-wheel vehicles (passenger cars etc.), the TD2000A for commercial vehicles and trucks (6- to 34-tires), and TD4000A for motorcycle, as well as a series for small aircrafts, and TD5600 for smart phone.

Thanks to advanced functionality and designs, the company's wireless TPMS have frequent won international awards, including the 2011 UK Motor of the Year Best New Accessories Award, 2009 & 2012 SEMA Global Media Award, among others.

All of Josn's wireless TPMS meet major international safety standards such as FCC, SAE, CE, E-mark etc., as well as having been stringently quality-controlled in-house, including water-proof, vibration, high-temperature, salt-spread tests etc.
