

Handle Development Co., Ltd.

Adjustable, universal security pulls and handles, knobs, screws, bolts for machining peripherals, automated equipment, fitness and rehab equipment

Handle Development Co., Ltd. was established back in 1994, and today it continues to capably fill OEM (original equipment manufacturing) and ODM (original design manufacturing) orders for its quality industrial parts for various types of equipment.

The company initially made stationery items, premiums, gifts, and desk clocks, among other products, and then ventured into industrial parts and accessories. Today its product catalog contains mainly pulls and handles of fiber-reinforced nylon, plastic, and zinc-alloy; plastic knobs; and plastic-headed metal bolts for adjustable handles.

Backed by well-honed manufacturing skills and a rich knowledge of the properties of various materials, the company is able to handle, in-house, the full production cycle from R&D and design to precision mold fabrication, injection molding, processing, assembly, and packaging.

Handle Development's products are widely used in the production of machine tools, woodworking machines, conveyors, auto-feeders, packagers, labelers, robotic arms, testers, ventilators, dust collectors, office chair seat bases, fitness and rehab equipment, healthcare equipment, automated equipment, semiconductor and photographic equipment, and toolboxes, among other products.

In addition to their exceptional quality, the attraction of the company's products is bolstered by their customized designs. For instance, Handle Development's knobs are available with caps in various combinations of seven different colors and four different shapes, allowing businesses to use the knobs as codes for corporate identification, product categorization, and ready brand recognition. The company has obtained several patents for the innovative designs of its products.

Handle Development Co., Ltd.
