## Automated heat stamping and heat transfer printing machinery

Yuio Tien Auto Machine Co., Ltd. was established in the southern Taiwan city of Tainan and has been making automated heat stamping and heat transfer printing machinery for over 20 years.

The company's product line encompasses heat transfer printing machines, flat-type automatic heat transfer printing machines, automated metal/non-metal heat transfer printing machines, multifunctional gilding and heat transfer printing machines, pen-holder automatic heat transfer printing machines, and cone-shaped curved and big area automatic heat transfer printing machines, among other items.

Yuio Tien has developed an innovative model that handles automated heat transfer printing on conical and curved surfaces for use in mass production. Unlike conventional models that require the operator to feed paper piece by piece during sector-type hot-transfer printing, this model performs smooth and stable oscillating-type automatic paper feeding that prevents paper from creasing. This product is most suitable for long-duration hot transfer printing on plastic conical items.

Yuio Tien has built an excellent reputation for innovation and stable quality in the market. The firm invests generously in R&D and constantly develops new products to keep its customers fully satisfied. It is happy to accept custom orders, and welcomes inquiries for more information.
