

# Eagle B&L Instrument Co., Ltd.

Giftware, bathroom equipment, two-colored bouncing balls, eye ball rollers

**E**agle B&L Instrument Co., Ltd. was established in Taipei City, northern Taiwan, in 2000 and is today a professional manufacturer of plastic injection products including multi-colored giftware, bathroom equipment (mugs, soap cases, brush racks), and toys. It also produces a variety of two-colored bouncing balls ("High Poppers") and eye ball rollers. Customer patterns are welcomed.

The company has set up a plant in Shenzhen, in mainland China's Guangdong Province, to produce eye ball rollers, sliding ball key rings, bouncing balls with LEDs, blasting eyes, and other items. The monthly output of SGS-patented two-colored bouncing balls there reaches 300,000~500,000 pieces.

Using a comprehensive set of equipment, the firm offers integrated manufacturing services from mold design, molding, and plastic injection to production and packaging, ensuring high quality standards and substantial cost-savings for customers.

Eagle B&L engages in constant research and development aimed at coming up with innovative products, especially those employing multi-color injection. Backed by its advantage in plastic molding, the company welcomes the development of ODM/OEM (original design/equipment manufacturing) in cooperation with its customers.
