

Tais T-P Co., Ltd.

Mold parts, cutters, and machine tools

Tais T-P Co., Ltd. (TAIS) provides tailor-made and TAIS-branded precision parts for stamping dies and plastic molds, and precision parts finished by CNC lathes. The company has also acted as an agent for mold counters made by Taiwan's Ballsum, accessories for grinding and milling machines made by Taiwan's PNH, and multi-purpose drilling bits made by ARTU of Germany.

Tais T-P uses materials from Japan to assure the quality and precision of its products. The Taiwan Ballsum mold counter, protected by patent in Taiwan and mainland China, is warranted for two million times of accurate counting in a temperature range of 120-160 degrees C. The PNH parts are built to Japanese standards for European, American, and Japanese customers. Each part is subjected to thorough examination before delivery, and comes with an approved check list attached.

The company launched its own TAIS brand in 2012 for cutters, taps, drills, and reamers contracted from pure manufacturers or outsourced by big-name European and American cutter makers. The ARTU drilling bits are made of special tungsten steel to assure quality.

TAIS makes its lathe-finished precision parts using CNC combo lathes, CNC milling machines, cam-controlled automatic lathes, and high-precision measurement tools, equipment that enables the company to process workpieces of steel, iron, aluminum, and stainless steel.

The company's products are popular with buyers in Southeast Asia, the Middle East, and Europe due to their reliable quality and reasonable pricing.
