

Kuen Tong Industrial Co., Ltd.

Precision metal parts, heat sinks, bicycle parts, auto parts, motorcycle parts, 3C parts, LED parts, medical equipment parts, etc.

Kuen Tong Industrial Co., Ltd., which has won ISO 9001:2008 certification and has ISO/TS 16949 certification pending, is a veteran specialist in the design, development, and manufacturing of high-quality, high-precision metal parts for a large variety of applications.

Ever since its establishment in 1992 the company has been aggressively expanding its product applications. It is globally known as a supplier of high-level metal parts for LEDs, 3C (computers, communications, and consumer electronics) products, smartphone housings, thermal dissipation modules (heat sinks), automobiles, motorcycles, bicycles, and medical equipment. It can, in addition, use different materials in its production, especially carbon fiber and titanium alloy, depending on customers' requirements.

To meet ever-increasing demand from customers worldwide, Kuen Tong recently inaugurated a modern integrated factory in Taiwan that is equipped with the most advanced production lines and the most up-to-date production management systems.

Kuen Tong reports that it currently operates 120 sets of computerized numeric control (CNC) equipment, including forging machines (200, 400, 600, and 800T models), milling machines (five- and four-axis models), broaching machines, pressing machines, and ultrasonic cleaning machines. The firm's strong manufacturing capability is supported by a superior quality-control system that employs top-end inspection equipment such as a Micro-Vu Excel 651UM measuring center, Sheffield Discovery II coordinate measuring machine, APEX vision measuring system, Wolpert Wilson Rockwell hardness testers, Mitutoyo granite plate digital depth gauge, surface roughness measurement equipment, and electronic height gauge, among others.

In addition to efficient production and reliable quality, Kuen Tong also boasts consummate R&D capability and the ability to offer value-added services such as product design drawing, rapid prototyping, and professional consultancy for new product development, to help its clients win markets.
