

Shenq Fang Yuan Technology Co., Ltd.

Maker of simultaneous-motion five-axis machining centers

Shenq Fang Yuan Technology Co., Ltd., a major machining-center maker that was founded in Taiwan in 1996, is known for its simultaneous-motion five-axis machines for processing intricate products such as watch cases, jewelry, small and medium-sized turbine blades, and tire molds for high-end cars.

While the company is only 17 years old, its general manager, Jimmy Huang, has been in the industry for over 30 years. He claims that his company has many advantages over its competitors, the foremost being the in-house design of all main components and assembly of machines. In-house design and assembly allow the company to avoid underselling and disputes about defective product liability.

The company's machines can be scaled up to workstation grade in accordance with specific customer needs. It maps out automation plans for its customers, and offers the automatic dial-up of pre-set phone numbers over the Internet upon identification of problems that are not being solved.

The company's automated machines use CCTV camera

technology, which was Huang's main focus before he established his machine-tool business. He likens the CCTV camera to the eye of an automated machine, and the servo motor to its hands.

The high quality of the firm's products has convinced contract manufacturers of Breguet watch cases to import its equipment.

The company exports most of its products to the United States, Canada, Mexico, Brazil, Hong Kong, Singapore, Thailand, Malaysia, India, Indonesia, Turkey, Greece, France, Germany, the United Kingdom, Poland, Russia, Ukraine, and the Slovak Republic.
