

Yang Light Engineering Co.

Auto parts, furniture parts, marine hardware, rolling adjuster, snap hook, forged steel, forged aluminium, bike parts, multi-axis CNC machined parts, sliding buckle, safety belt etc.

Founded in 2005, Yang Light Engineering Co. is an ISO 9001: 2008-approved developer and manufacturer of metal hardware of high quality and precision with very competitive prices.

The maker operates two factories in Taiwan with some 150 employees and backed by a wide range of advanced and fully automated machinery. The firm's engineering department has been continually updating skills and technical expertise, as well as looking for newer and better manufacturing methods to achieve the highest product quality with maximized cost-efficiency.

As a major OEM supplier, Yang Light offers in-house manufacturing and processing services, including forging, progressive stamping, laser cutting, heat treatment, computer numeric control (CNC) milling, lost-wax casting, drilling, plastic injection molding, electro-plating, sandblasting, grinding, and polishing.

The company is a versatile manufacturer with strong expertise and know-how in materials and production methods, and its products are available in stainless steel, aluminum, alloy, mild steel, rubber and plastic.

Yang Light offers a wide range of product lines, including mainly automotive ratchets, tie-downs, knit straps, fasteners, zinc-alloy buckles, shackles, pulley fittings, medical equipment, telecommunications equipment, motorcycle parts, auto parts, hand tools, tool bags among many others. All of the company's products meet CE and UL standards. Buyers from many segments purchase products from Yang Light, including military vehicles, watercraft, automotive, agricultural equipment, leisure and sports equipment, furniture, construction and climbing equipment.

The company ships about 80% of output to major customers in Europe, North America and Japan, many of whom being major international enterprises in the automotive and electronic industries.

To achieve sustainable development and evade underselling competition with low-cost rivals, Yang Light has been upgrading into an ODM to go upmarket by tapping its strong design capability.
