

Cosda

Manufacturing Company

Auto repair tools for shock absorber, engine cylinder, radiator, brake system, steering system etc.

Established in 1978, Cosda Manufacturing Company is a veteran tool maker specializing in developing, innovating and manufacturing quality auto repair tools and diagnostic instruments, being ISO 9001: 2008 certified, and meeting CE, SGS and REACH standards.

With long-term devotion to product development and technical advancement, the maker supplies a wide variety of vehicle repair tool products, including those for engines, brake systems, cooling systems, steering systems, suspension systems, exhaust systems, wheels etc., which are widely used to repair shock absorbers, engines, cylinders, radiators, brake calipers and hoses, steering systems, exhaust pipes and wheels.

Cosda has also developed a comprehensive range of testers, including universal radiator pressure tester kits, gasoline injection pressure tester sets, cylinder compression testers etc.. Up to 90% of the firm's output is exported on an ODM basis and the remainder on an OEM basis to customers in both tool and automotive industries, with about 60% going to Europe, 30% to the United States, and 10% to Asia.

Cosda insists on honesty in doing business, and is fully confident of developing long-term and stable partnerships with customers, due to having strong ability to meet customers' requirements and provide the most satisfactory services. The firm is dedicated to helping customers through its extensive knowledge of auto repair and maintenance tool design, development and production. The company's attractive pricing, superior technical skills, reliable lead time and strong marketing support are other major attractions for buyers.
