

Water House Co., Ltd.

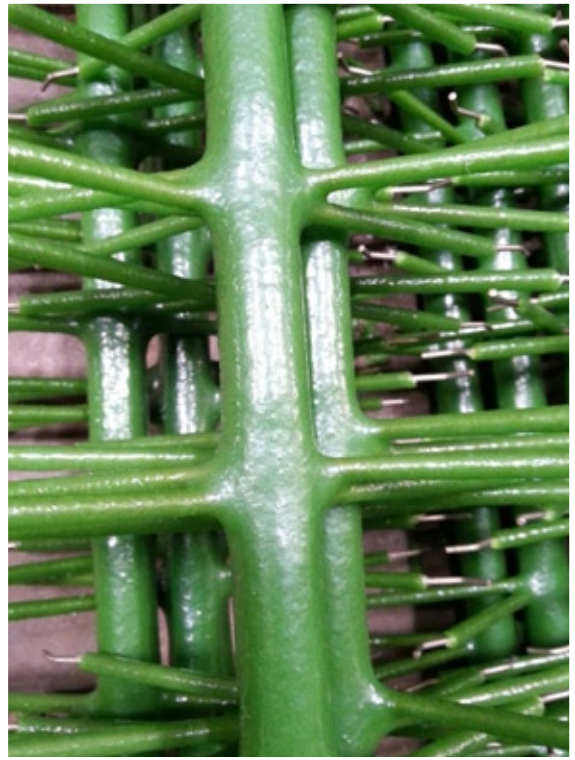

Plastic powder for plating hardware

Ever since it was established in 1980, Water House Co., Ltd. has specialized in making plastic powder for plating hardware, such as jigs, hooks and racks, for over three decades as the first manufacturer of this kind in Taiwan. Decades of dedication to researching and manufacturing plastic powder has enabled Water House to accumulate ample expertise and experience to lead peers, and build solid reputation among electroplating firms at home and abroad, especially in the ASEAN member nations. The veteran manufacturer particularly is proud of various

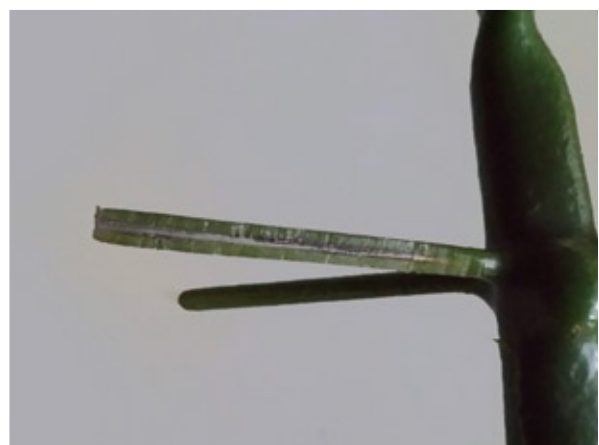

formulas that are made using its extensive know-how, to feature greater stability and resistance to extreme temperatures, acid and alkali, as well as higher chemical inertia, easier application, stronger adhesion to metal and higher energy efficiency, compared to competing products.

Moreover, Water House's plastic powder can better help water-based ED (electro-dip) paint to be baked on workpiece plated with nickel, hard-chromium, bronze, verdigris, gold or K-gold, while allowing operators to smoothly finish several continuous processes without changing workpieces during baking, thus saving manpower and preventing spotting.

In addition to common formulas, the company also provides plastic powder of exclusive properties to meet custom demand, being capable of shipping several tonnes at once to customers worldwide promptly and efficiently.

Water House Co., Ltd.

No. 33, Lugong S. 5th Rd., Lugang Town,
Changhua County 505, Taiwan
