

# Kun Sheng Machine Co., Ltd.

Recycling and reproducing equipment, plastic processing machines, waste tire cycling machines, plastic pelletizing machines

With over 20 years of expertise and practice in making plastic processing machinery, Kun Sheng Machine Co., Ltd. has grown into one of Taiwan's most experienced suppliers of recycling and reproducing equipment.

To pull ahead of the competition, the company uses strong R&D and rich store of know-how to design and develop a variety of recycling and reproducing equipment for soft and rigid plastic wastes such as wires, cables, and tires, and to provide professional solutions including plant planning and floor layout that meet the needs of its customers.

Kun Sheng's product lineup encompasses a range of recycling and reproducing equipment, plastic processing machines, and preprocessing and recycling machines, as well as related peripherals and components like dryers, mixers, cutters and knives, breakers, and cutting machines for

metalworking. The products are all manufactured under strict quality controls in line with international standards, employ advanced PLCs for excellent performance and easy operation, and bear the CE Mark of safety.

Among the company's hottest sellers is the KS-DPP300 model de-watering and pelletizing machine, which uses special melting and crushing methods to treat recycled PP and PE waste to cut water content to under 5%, so that they can be pelletized without other follow-up processes. The machine has an hourly output of up to 800 kilograms, with a volume reduction ratio of 5:1.

Kun Sheng's products are well known among professionals from Europe, North America, Asia, Australia, the Middle East, and Central and South America.
