

Henma Machinery Corp.

Aluminum copy routers for doors and windows, aluminum cutting / sawing machines, metal bending machines

Established in 1996, Henma Machinery Corp. has been in the machinery industry for nearly 20 years, specializing in Metalworking Machinery. Initially, the company engaged in bench lathes and milling machines, afterward, with the competition in the market, Henma eliminate outdated machine models, changed into Metal-cutting Machines (circular saw machines, abrasive disc saw and aluminum cutting machines) to meet market needs, also provides OEM / ODM customization services to meet the diverse demands of the metals industry. Henma considerable attention to quality, safety, innovation & reliability and provide a stable, worthy of trust, high-quality machine.

Henma's CE-approved machines are designed and manufactured completely in Taiwan, and all are exported. For the quality, the company always have a rigorous self-requirements. Not cost-effective will eliminate, or need to innovate to survive. Inexpensive basic industrial machinery, such as to strengthen the internal structure and function will be able favored by the market.

The company business focused on the European market until the debt crisis there. Now has to adjust our strategy, will pay much attention to emerging markets. The rise of emerging markets, a large number of construction everywhere, a great need for basic industrial machinery such as Metalworking machinery. Henma's machines used in the building materials, including metal cutting, metal bending and copy router machine. Special mention to copy router machine, for processing in aluminum profiles: for windows, doors and accessories in a variety of holes, shapes, cutouts ... etc.

" In any market, if you want to do business successfully, to be find the right person, the right partner. " - Henma sales manager Linda said. Henma also are looking for machine dealers and experienced local machine sales to join us.
