

C-AO Pump Industrial Co., Ltd.

Small submersible pumps, magnetic drive pumps, DC bilge pumps, utility pumps, sewage pumps, pond & waterfall pumps, fountain pumps, water pumps etc.

Established in 1981 as a pump manufacturer, C-AO Pump Industrial Co., Ltd. initially developed small, conventional submersible pumps, but in 1983 developed its first magnetic-drive model that is design patented in Taiwan as better alternative to direct-drive ones.

The company's specialized R&D realizes product diversification and applications of its UL and CSA approved items that are widely used in household appliances, industry, watercrafts, landscaping, and aquaculture.

C-AO has integrated, in-house R&D and fabrication, continually turning out innovative products, with focus on energy-efficiency and eco-friendliness. Known for quality and R&D capability, the company manages to grow steadily despite fierce, underselling competition.

With typical submersible pumps being mostly cast-iron, larger, heavier, C-AO has developed models with stainless-steel and engineering-plastics to be lighter, with higher flow, more efficient and multi-purpose that are highly regarded by buyers and users.

With over 30 years of experience, in-house R&D, and sound marketing network, C-AO has built a solid reputation, with agents in the U.S. and Southeast Asia for promotion. Striving to further expand markets into Europe, South America, Africa, and Asia, the firm is seeking long-term partnerships for joint export ventures.

To meet special demand, C-AO also utilizes electronic technologies to develop solar-powered DC brushless pumps for energy efficiency; while exclusive R&D capability and stringent process control enable delivery of products of consistent, internationally recognized quality.

C-AO accepts OEM, ODM and custom orders, and does its utmost to improve techniques and develop new items to meet changing demand.
