## »»» Brake Pad/Lining Production Line (Turnkey Project)

Founded in 1978, Chemex Technology Inc. is an ISO 9001: 2008-approved company dedicated to helping global customers set up integrated production lines for manufacturing quality and reliable brake linings and pads.

The company's brake pad- and lining-making machines are globally marketed under its own brand of CHEMEX-NANHUA, with these quality products/equipment being certified to meet different international standards such as AMECA, SAE, SGS, etc., indicative of the maker's strength in the field.

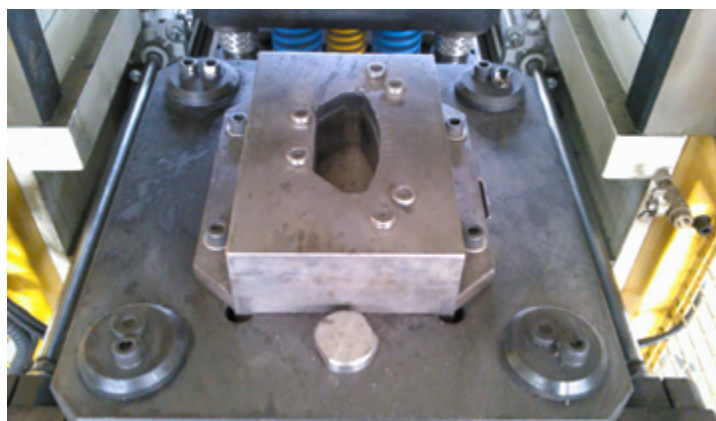

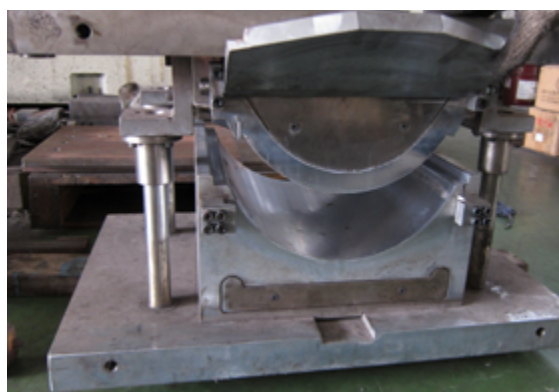

Chemex also offers turnkey plants for making brake linings and pads, including friction material mixer, pre-forming machine, hot press, backing plate auto gluer, complex working machine for chamfering, grooving, grinding, oven, powder-coating line, friction tester, etc., which together form total solutions for anyone aiming to be a strong player in the brake lining and pad manufacturing business.

The maker says that the CHEMEX-NANHUA hydraulic machines are widely adopted by almost 90% of brake pad makers in Taiwan, and are also popular with major customers in China, Malaysia, India, Algeria, Azerbaijan, Iran, Canada, etc.

All Chemex's brake pad-making and peripheral machinery can be customized according to customers' various requirements. The brake pads made by Chemex's production lines are said to offer consistent performance in comfort and control confidence; the best control of noise, vibration and harshness (NVH); significant reduction in brake dust for

cleaner wheels; increased durability of pad and rotor; and many other advantages. Materials for making these brake pads are non-asbestos, semi-metallic, and ceramic, etc.
