## Screen-printing machines

ATMA Champ Ent. Corp., founded in 1979, is one of Asia's leading manufacturers of screen-printing equipment. The company mainly develops, produces and markets a wide range of screen-printing machines under its own 'ATMA' brand.

Based on its commitment to high-quality products, ATMA is capable of developing advanced manufacturing technologies and helping clients to improve their manufacturing processes. Thanks to this capability, its products have been sold to more than 70 countries in the world.

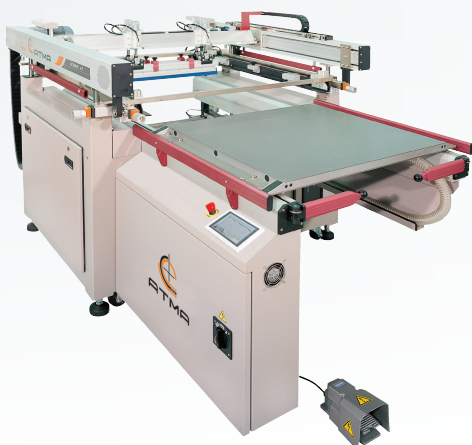

The company is focusing on high-precision technologies, digitalization, and automation in the development of ever-more-advanced screen-printing machines in the coming years.

A total of 52 models developed by ATMA, including a green energy silicon wafer screen printer, fully automatic screen printing line, and opto-electronic precision screen printer, have won the Taiwan Excellence Award so far.

The company is certified to ISO9001, ISO14001 and CE-mark international standards. It also has acquired 100-odd patents at home and abroad.

ATMA is dedicated to creating high-performance, high-value-added screen-printing machines that can be widely applied in the glass, decoration, industrial processing, optoelectronics, printing circuit board (PCB), biomedical, and green energy industries.

To ride the fast-growing optoelectronics industry bandwagon, ATMA has been working on solar cell silicon wafer screen printers for four years, and sales to the optoelectronics industry now make up 32% of the firm's total revenue.
