

ALF Technology Industrial Co.

Car radar detectors, laser jammers, laser testers

The ALF Technology Industrial Co. is a high-technology firm specializing in the development and production of high-quality and high-precision car radar detectors, laser jammers, and laser testers.

The company says that its quality products are designed for all car makes and models, and that they can effectively prevent a vehicle from being caught by laser guns and other speed-detecting devices. In addition, ALF's products conform to global specifications, so they can work well for laser-gun speed detectors anywhere.

ALF proudly claims that "Professionalism, Quality, Function, and Service" are the top priorities in its operations, which cover everything from product innovation and design to production in-house. The company's laser jammers are popular with customers in Taiwan, China, the U.S. and Europe, thanks to their user friendliness and high quality. ALF stresses that it also provides the finest in after-sales services to assure that end-users have not only useful products but also good services for them.

In addition to several models that ALF itself markets globally, the company also supplies laser jammers to international customers on an ODM/ODM basis.

ALF operates a modern integrated factory in Taichung, central Taiwan. Skilled workers, experienced R&D specialists, and a comprehensive range of advanced production and testing/inspection equipment help the company to consistently achieve the best quality and durability. Please contact ALF for more product and company information.
