

Atoli Machinery Co., Ltd.

Drilling machines, punching machines,
riveting machines, and others

Atoli Machinery Co., Ltd., founded in central Taiwan in 1974, makes drilling machines, punching machines, riveting machines, cutting tools, magnetic stands for drillers, heavy-duty electric drillers, automatic-portable magnetic cutting units, pneumatic riveting machines, and tapping machines.

Having started out by concentrating on the sale of machinery hardware, in 1974 the company equipped itself with the capability of producing high-speed precision drilling machines and pneumatic riveting machines. Shortly after that, it added hydraulic riveting machines and air-hydraulic double-axis riveting machines to its product lineup.

Then Atoli worked with the Mechanical & System Research Laboratories of the government-backed Industrial Technology Research Institute (ITRI) to develop steel-based automatic drilling machines, and in 1981 it established an overseas marketing unit to handle sales in such areas as Europe, Australia, the Americas, Southeast Asia, mainland China, and Hong Kong.

To assure top product quality, reliability, and stability, Atoli employs a seasoned R&D team that works to upgrade manufacturing technology and implements a strict quality-control system.
