

SMC Corp.

Brush cutters, water pumps, power sprayers, power lawn mowers, hedge trimmer,s and related parts and engines

The SMC Corp. specializes in making power agricultural and garden equipment using engine technologies licensed by Honda and other globally known suppliers.

The company says that all of its power equipment, including water pumps, knapsack power sprayers, hedge trimmers, power lawn mowers, vibrator machines, mist dusters, and brush cutters, are driven by either Honda's GX25/ GX35 mini four-stroke OHC (overhead camshaft) engines or GX160 commercial grade engines, which feature light weight, powerful performance, low noise, easy ignition, and fuel efficiency.

Importantly, SMC products that consume ordinary gas measure up to clean-air standards established by the U.S. EPA (Environmental Protection Agency), CARB (California Air Resources Board), and CE, assuring users of unquestionable safety and eco-friendly operation. Additionally, high-quality parts for brush cutters, water pumps, and power sprayers are also available from the company.

SMC's quality-driven manufacturing involves consistent by-the-book international quality standards that are assured by processes carried out at the factory, where the floor layout, quality control measures, and facilities have achieved ISO9001 and CE certification.

In addition to marketing various kinds of power agricultural and garden machines worldwide under the "Kawata" brand name, the company can also handle contract orders on an OEM and ODM basis and guarantees its customers efficient production, competitive innovation, and reasonable prices.
