

Jin Shoei Tain Co., Ltd.

Automobile repair, ratchet wrench, ratchet screwdriver, breaker bar, ratchet hex wrench

Jin Shoei Tain Co. is one of Taiwan's most seasoned makers of screwdrivers and related accessories with strong commitments to quality, innovation and technology.

The company has established a high profile in its line through decades of dedication to the constant improvement of manufacturing technology. One of the firm's competitive advantages, for example, is the consummate cold forging capability that allows it to skillfully apply higher-grade materials, including S2 steel, in its production operations. This helps the firm meet customers' demands for guaranteed high quality.

Jin Shoei Tain today turns out a variety of screwdrivers and bits, ratchet screwdrivers, nut setters, adaptors, sliding handles, and adjustable socket handles. The company's products meet the torque and durability required for SGS certification, and this has made them popular with industrial and professional customers worldwide.

Thanks to a strong commitment to R&D, the company is able to upgrade its product mix by launching several new products every year; for 2012, new releases include 1/4", 3/8", 1/2" and 3/4" breaker bars. Company officials claims that all breaker bars in these sets, which are protected in many countries by invention patents for improved structural design, can generate 1.6 times the torque force required by DIN standards and can turn up to 10,000 times. Another innovative product is ratchet screwdriver with rotatable handle, with the handle able to bend 116 degrees and 180 degrees to prevent users from being injured and secure comfortable grip.

In order to replace hex keys, the company has also launched an offset hex screwdriver set which also exceeds DIN standards for both durability and torsion, comes with several interchangeable bits of different diameter sizes. Jin Shoei Tain's new offerings for 2012 also include 1/2" and 3/4" telescopic breaker bars which allow easy length adjustment by telescoping the handle and then swiveling it to fix the desired length.
