

Fukuno Seiki Co., Ltd.

CNC vertical machining centers and CNC lathes

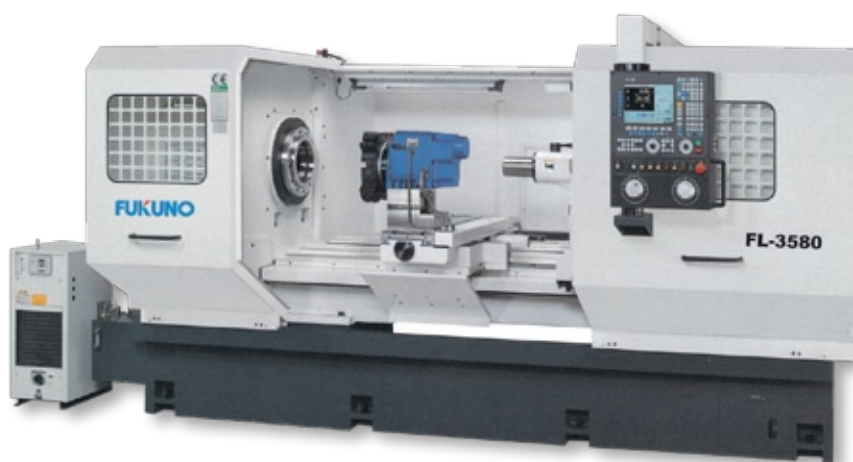

Fukuno Seiki Co., Ltd. is a contract supplier of machine tools, specializing in midsize CNC vertical machining centers and CNC lathes outfitted with spindles having a maximum through-hole diameter of nine inches. Its machines are designed for industries including car making, aircraft manufacturing, electronics, and pipe making.

The company equips its machines with a four-axis machining mechanism for general-purpose production and a seven-axis machining mechanism for special-purpose processes such as cutting on wheel rims and pipes.

The company's wheel-rim cutter can be used with rims ranging from 13 to 16 inches in diameter, while its pipe-lathing machines can handle pipes with lengths up to five meters. The rim machines boast an error tolerance of only 0.03 mm.

To ensure accuracy, the company's machines are equipped with CNC controllers from Siemens of Germany, Fanuc of Japan, and Fagor of Spain. They have been shipped to around 27 different countries, including Japan and others in Europe and Latin America.

Fukuno Seiki's premier advantage is its abundant manufacturing experience. The firm itself has 18 years in the industry, and its chief executive officer, Lin Ding-tzi, has more than 30 years of involvement.
