

Axisco Precision Machinery Co., Ltd.

Automated processing equipment, broaching machines, rotary multi-spindle drilling machines, reaming and tapping machines, CNC deep-hole drilling machines, and more

.....

Axisco Precision Machinery Co., Ltd., founded in 1984, has developed into a veteran developer and manufacturer of high-quality automated metal processing equipment. The company is committed to creating the greatest benefit for customers by providing the most economical CNC equipment for mass-production solutions.

With stable growth over the past 30 years, Axisco has shipped thousands of machines to customers all over the world, making it a major player in the business. The company says that it can custom-make various kinds of equipment, including sphere finishing, milling, drilling, boring, reaming, tapping, cutting, and broaching processing machinery. A machine can be designed to be single- or multi-purpose, and the company has the know-how and experience needed to provide whole-plant equipment for companies in industries such as auto parts, hardware (door closers/hinges), ball valves, hand tools, hardware, lock and electronics components, and many others.

Axisco says that it uses the most advanced ERP (enterprise resource planning) system and the 5S workplace organization method at its modern integrated factory. It is also proud of the comprehensive pre- and after-sales services provided to customers around the world by its sales and service team.

Backed by the support of a strong R&D team and a long accumulation of know-how, Axisco offers various types of special-purpose machines to meet its customers' budgets and production conditions, and to achieve automated production and operational standardization.

The firm's major product categories include vertical external broaching machines; internal broaching machines; vertical rotary multi-spindle drilling, reaming, and tapping machines; broaching machines; milling machines; single-purpose machines; CNC deep-hole drilling machines; and gun drilling machines.
